# User instructions ClimaRad S-Fan

Operation of the ClimaRad S-Fan

⚠ **Please note! The air supply opening must always remain open and unimpeded!**

Operation ClimaRad S-Fan

The ClimaRad S-Fan can be operated by using the control panel on the underside of the device.

Control panel

Function keys

AUTO ▶	<u>Automatic control.</u> The room ventilation is controlled automatically by your ClimaRad S-Fan, which ventilates on the basis of CO_2 and RH measurements.
⊕ ⊖	<u>Manual: manual ventilation using outside air:</u> You can set your desired ventilation speed with the + and – keys on the control panel. After a period of 8 hours, the ClimaRad S-Fan will switch back to the automatic setting. Use this function for example when you want to lower the temperature in your bedroom by a few degrees at night in the summer (summer night ventilation).
⏸	<u>Pause/Off.</u> Use this function if you (temporarily) do not want to ventilate. After a period of 4 hours, the ClimaRad S-Fan switches back to the automatic setting. When the button is pressed for 5 seconds, the unit switches off. In case of emergencies you can use this function to switch off the device.
⊙	No function.
⊙⊙	No function.
⊙ ⊙⊙ ⏸	<u>Child lock.</u> The child lock will be activated when you press and hold the three buttons on the panel for 4 seconds.
